DAY 1 – LEARNING NOTES

Introduction to SQL and Python | Quick Revision

1. SQL – Introduction

SQL (Structured Query Language) is used to communicate with and manage databases.

Key points

Term	Meaning
Database	A collection of organized data.
Table	Stores data in rows and columns.
Query	A command used to access or manage data.
Main operations	Store, retrieve, update and delete data.
Popular databases	MySQL, Oracle, PostgreSQL and SQL Server.

Remember: SQL is used to manage and manipulate information stored in a database.

2. Python – Introduction

Python is a high-level, interpreted programming language known for its simple and readable syntax.

Key points

Topic	Meaning
Variables	Used to store data.
Data types	int, float, string and boolean.
Features	Easy to learn, readable and open-source.
Uses	Web development, automation, AI, machine learning and data analysis.

Remember: Python is used to build applications, automate tasks and work with data.

Quick Revision

SQL: Manages database information. **Python:** A programming language used to build and automate.
